# Web Based Next Generation PLM

web·tech

Connecting People with Process

WebTech is fast becoming the premier PLM and PDM system for Fashion and Apparel companies. Our modular framework includes powerful workflow features and tight integration between modules and many popular ERP systems

WebTech's powerful line sheet/catalog module enables salespeople to generate their own line sheets on the fly in minutes, and integrates seamlessly with our other modules to eliminate duplicate entries and wasted time up-loading and re-uploading images.

Upload to WebTech seamlessly from Within Illustrator and our Graphics Engine converts Illustrator files to JPEG and PNG, which offloads the tedious work of creating JPEGs and keeps your designers designing.

Process Calendars Automatically calculate Time and Action dates.

WebTech's 100% browser based interface is fully Mac and PC compatible with both Firefox and Internet Explorer compatibility.

Thanks to our powerful template based workflow engine, Sample logs, Licensing Approval and Lab dip spreadsheets are all obsolete.

## User Friendly Pricing, Quotation Management, and Sample Tracking

- **Reduced Product Development Costs**
- **Accelerated Time to Market**
- **Revision Management**
- **Electronically send Tech Packs Overseas**
