The result is a significantly improved project completion record, more satisfied clients and reduced non-billable work.

### **Deliver Projects On Time and Within Budget**

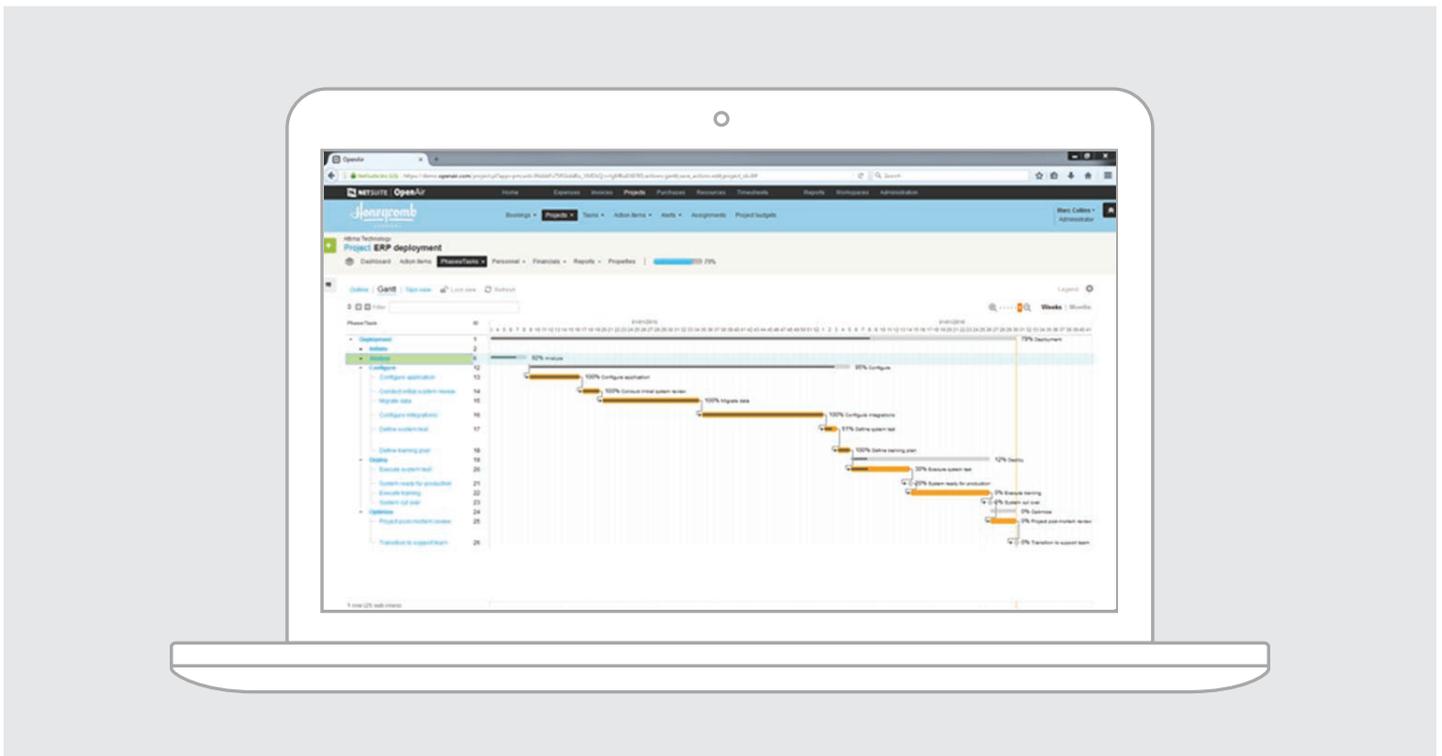

Create revenue and cost estimates for engagements, and use “what if” project planning scenarios to optimize price, margin, billing rates and staffing. OpenAir project management software enables you to view pipeline reports, gaining visibility into future enterprise revenue and profit opportunities.

### **Increase Client Involvement**

Deepen your client relationships with OpenAir project management software by giving them access to detailed project status reports. Project management tools including Gantt charts, exceptions reports and project status summaries give clients the information they need to remain proactively involved and up to date on project progress.

### **Project-Based Milestones**

Project milestones are critical points that you monitor throughout the life cycle of a project. Milestones highlight important interim events, such as the completion of a phase, delivery of materials and payment for work performed. These milestones are useful, for example, in setting dates for billing and completeness of work.

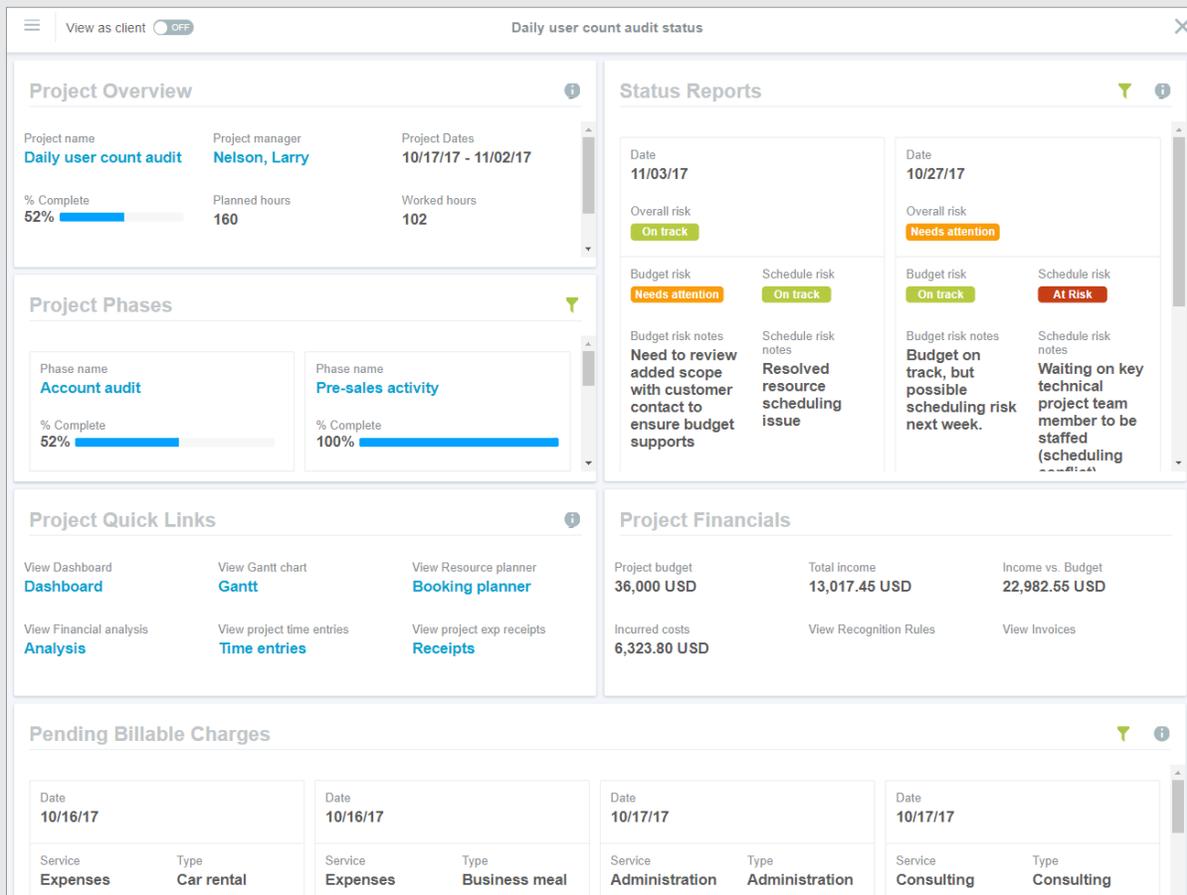

## Project Workspace

OpenAir's Project Workspace gives the project team a visual of the project plan, as well as access to all key functions to help improve progress, communication and collaboration across the team. Using the automated Project Status report, project managers can see important key performance indicators at a glance around project schedule, key milestones or task completion, and important financial indicators. Flip a switch and create a status report that focuses on core progress indicators to improve communication with your customers.

## OpenAir's Project Management Solution Integrates with Microsoft Project
