

SAGE HRMS HOSTING

Your Sage HRMS software is key to helping you run your business more efficiently, remaining competitive, and growing your company. The question is, where is the best place for your software to reside? On your servers (on-premise) or hosted in the Cloud?

SWK can help. We can host your Sage HRMS in our Secure Cloud Hosting environment. Keep the same Sage HRMS experience with the flexibility of remote access, enterprise level cybersecurity, data backup and recovery, and eliminate the need to maintain it with on-premise infrastructure.

WE'VE GOT YOU COVERED

Today's data threats don't discriminate; businesses of all sizes are susceptible to attacks. However, small to medium sized businesses (SMBs) are often less prepared to deal with security threats than their larger counterparts. The reasons for this vary from business to business, but ultimately it comes down to the fact that SMBs often have less resources to devote to cybersecurity efforts.

We acknowledge this unique challenge to SMBs so SWK includes an elite level cybersecurity service as part of our hosting package. This means that no matter the size of your company there is an affordable option for cybersecurity and your applications are protected in the cloud.

Avoid spending your team's valuable time on patching software, performing upgrades, and backing up data.

SWK can manage your mission-critical business applications, so your team can spend more time on helping your business succeed.

Application hosting with SWK allows you to focus on what really matters.
